Dimensionality Reduction

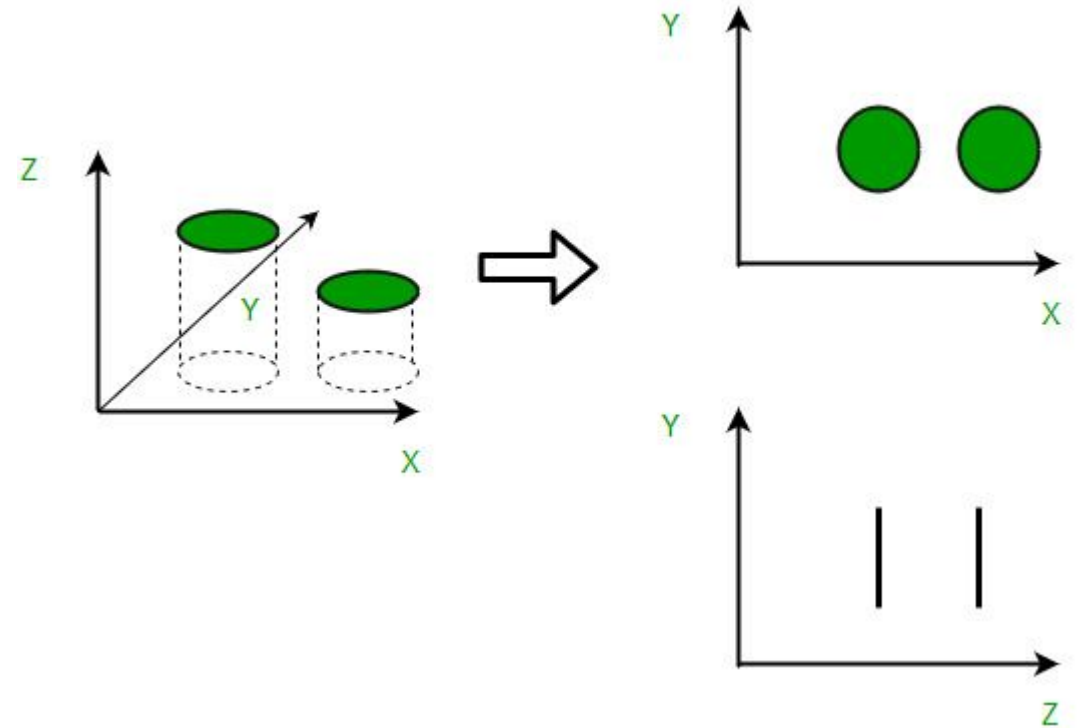

C5|Crunch Labs: Crunch AI Data Science

Dimensionality Reduction

What is Dimensionality Reduction?

- Technique used in machine learning and statistics to reduce the number of input variables (features) in a dataset while retaining as much relevant information as possible.
- Dimensionality reduction helps to make data simpler and more manageable by reducing the number of features but still preserving the essential patterns or structure in the data
- Examples:
 - Independent Component Analysis (ICA)
 - Linear Discriminant Analysis (LDA)
 - Principal Component Analysis (PCA)
